# Wingtips

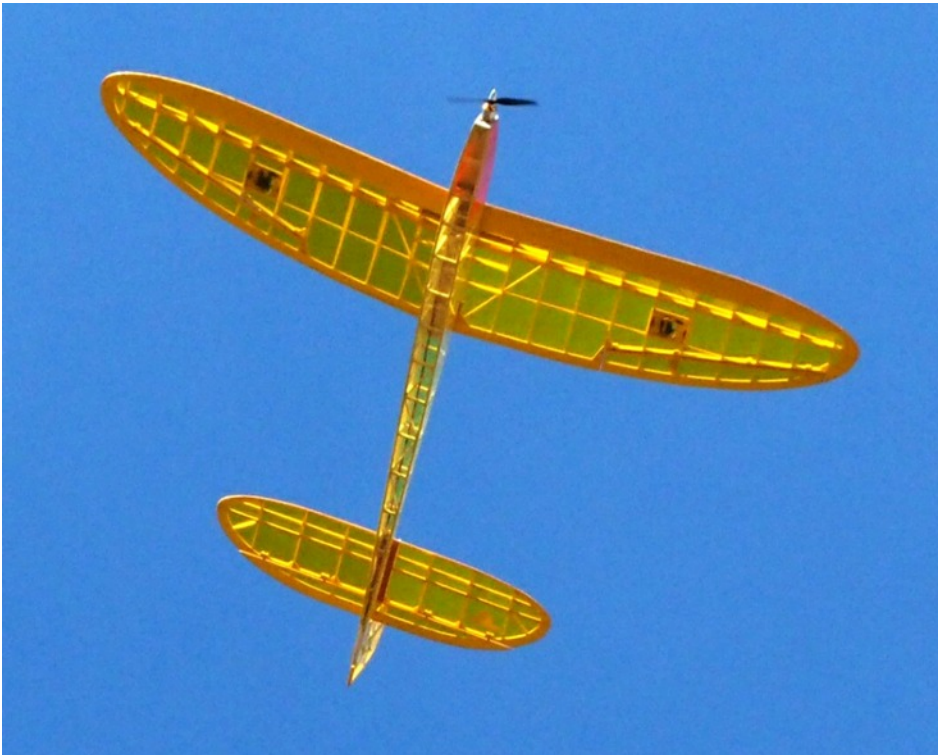

Simon Pentland's Hangar 9 Phoenix 7, powered by an OS 50 cuts through the smoke at the field. (The flames are to remind readers that fire is always possible at the field.)

Inside: Leprechaun, page 2; Tiger Moth, page 3

Wingtips is the Belconnen Model Aero Club newsletter, this issue published 15 January 2020

Above, Ken Griffiths launches Ron Barnes' *Leprechaun* that he built to 1947 plans, which makes the model an Old Timer. Ron made some minor changes – for instances not to have the polyhedral wing. Neil Moffat helped out with the plans for what was originally a slope soarer. The photo shows one of several trimming flights.

Peter Ederle's Tiger Moth is a Great Planes ARF with a 1780mm (70") wingspan. The engine is a 20cc DLE petrol that provides ample power for what Peter describes as a very pleasant flying model.
